

## **Diflufenican + metribuzin.**

Rates quoted in HerbiGuide are for a 1:1 mixture of Brodal plus Lexone.

200 mL of this mix is equivalent 100 mL of Brodal plus 100 grams of Lexone.

It is used mainly for control of Wild Radish plus Capeweed and Spiny Emex in the Narrow-leaved Lupin varieties Gungurru and Merrit which have a greater tolerance of Lexone than other varieties.

This mix may damage the crop but there are few other solutions for some weed combinations.

See the individual components for further information.
