Genfarm
Imazethapyr
700 WG
HERBICIDE

ACTIVE CONSTITUENT: 700 g/kg Imazethapyr

GROUP B HERBICIDE

For the pre or post emergence control of certain weeds in *Centrosema* (Cavalcade), chickpeas, faba beans, field peas, lucerne, mung beans, peanuts, serradella, soybeans and subterraneum clover as specified in the directions for use table.

IMPORTANT: Read the attached booklet before use

NET CONTENTS: 250 g
(2kg, 8kg)

Landmark Operations Ltd
Suite 2, Level 3, 64 Talavera Road,
Macquarie Park,
NSW, 2113
Tel: (02) 9889 5400
STORAGE AND DISPOSAL
Store in the closed, original container in a cool, well-ventilated area. Do not store for prolonged periods in direct sunlight. Triple or preferably pressure rinse containers before disposal. Add rinsing to spray tank. **DO NOT** dispose of undiluted chemicals on site. If recycling, replace cap and return clean containers to recycler or designated collection point. If not recycling, break, crush or puncture and bury empty containers in a local authority landfill. If no landfill is available, bury the containers below 500 mm in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots. Empty containers and product should not be burnt.

SAFETY DIRECTIONS
Will damage eyes. Will irritate skin. Avoid contact with eyes and skin. When preparing spray, wear cotton overalls buttoned to the neck and wrist and a washable hat, elbow length PVC gloves and goggles. If products in eyes, wash it out immediately with water. Wash hands after use. After each day’s use, wash gloves, goggles and contaminated clothing.

FIRST AID
If poisoning occurs, contact a doctor or Poisons Information Centre (Phone Australia: 13 11 26).

MATERIAL SAFETY DATA SHEET
For further information refer to the Material Safety Data Sheet (MSDS) which can be obtained from the supplier.

CONDITIONS OF SALE
The use of this product is beyond the control of Landmark Operations Ltd. No warranty is expressed or implied regarding the suitability or efficiency for any purpose for which it is used by the buyer. Landmark Operations Ltd accepts no responsibility for any consequences resulting from the use of this product. Landmark Operations Ltd will not be held liable for any loss, injury or damage arising from the sale, supply or use of this product, whether through negligence or otherwise. No responsibility will be accepted for any consequences whatsoever resulting from the use of this product.

<td><strong>Pre-emergence Chickpeas</strong></td>
<td>Deadnettle (<em>Lamium amplexicaule</em>), Indian hedge mustard (<em>Sisymbrium orientale</em>), White Ironweed (<em>Buglossoides arvensis</em>), Wild Radish (<em>Raphanus raphanistrum</em>), Wireweed (<em>Polygonum aviculare</em>)</td>
<td>Vic, Sa only</td>
<td>45g plus 1.0 to 1.5 L Flowable Simazine (500g/L)</td>
<td>Apply to moist, well prepared, clod and weed free soil after planting and before crop emergence. Sufficient rainfall is required after application and prior to weed emergence to wet soil to a depth of 5cm. Use the higher rate of simazine on heavier soils, or where higher weed pressure is expected, or where wireweed is problem. Under adverse conditions, weeds may not be totally controlled but populations will be significantly reduced and surviving plants will generally be severely retarded. Good crop growth will aid weed control. Transient yellowing or reddening of the crop may occur. The risk of crop injury may be increased under adverse growing conditions. DO NOT use this mixture on soils, and in areas, ill suited to growing chickpeas as crop injury will be increased.</td>
</tr>
<tr>
<td><strong>Pre-emergence Faba beans, Field peas</strong></td>
<td>Indian hedge mustard (<em>Sisymbrium orientale</em>), Shepherd's purse (<em>Capsella bursa-pastoris</em>), Stinging nettle (<em>Urtica urens</em>) (NSW, Vic only), Toad rush (<em>Juncus bufonius</em>), Turnip weed (<em>Rapistrum rugosum</em>), *Deadnettle (<em>Lamium amplexicaule</em>), *Doublegee (<em>Emex australis</em>), *Paterson's curse (<em>Echium plantagineum</em>), *Wireweed (<em>Polygonum aviculare</em>), **Wild oats (<em>Avena fatua</em>)</td>
<td>NSW, Vic, SA, WA only</td>
<td>70 g</td>
<td>Apply to moist, well prepared, clod and weed free soil after planting and before crop emergence. Sufficient rainfall is required after application and prior to weed emergence to wet soil to a depth of 5cm. Under adverse conditions, weeds may not be totally controlled but populations will be significantly reduced and surviving plants will generally be severely retarded. Good crop growth will aid weed control. * Surviving plants will generally be retarded and will not complete with the crop. A follow up spray with another product will generally be required for control of Wild Radish under high weed pressure or high rainfall conditions. **Competition from grass weeds will be significantly reduced for at least 8 weeks. A post-emergence grass herbicide application may be required. (Refer to COMPATIBILITY section of label). *** Populations may be reduced but plants will generally be significantly stunted. Seed set will also be reduced. Use the higher rates under anticipated high weed pressure and in high winter rainfall areas. DO NOT use on faba beans on light sandy soils. On alkaline soils, the risk of crop damage to faba beans may be increased under adverse growing conditions. Refer to the Crop Safety and Follow Crop sections of this label regarding varietal selectivity and follow crops.</td>

</tbody>
</table>
### Pre-emergence to weeds

| Lucerne (established), Serradella (established) | As for pre-emergence use in Faba beans and Field peas (winter weeds) and in Soybeans (summer weeds) | Qld, NSW, Vic, SA, WA only | 70 to 140g | Use pre-emergence to weeds in **established lucerne only**. Apply following cutting or grazing, if necessary in mixtures with registered knock-down products. Apply at rates as per pre-emergence use in Faba beans and Field peas (winter weeds) and in Soybeans (summer weeds). Note **CRITICAL COMMENTS** applying to weeds in those crops. |

| Centrosema (Cavalcade) (Pre-emergence to crop) | NT only |  

### Post-emergence

| Lucerne, Serradella | As for post-emergence use in Field peas (winter weeds) and in Soybeans (summer weeds) | Qld, NSW, Vic, SA, WA only | 70g to 140g plus a non-ionic surfactant at 200mL/100L | Apply to actively growing weeds in the cotyledon to 3-leaf stage (winter weeds) and 2-4 leaf stage (summer weeds). Apply at rates as per post-emergence in Field peas (winter weeds) and in Soybeans (summer weeds). Note **CRITICAL COMMENTS** applying to weeds in those crops. **Seedling**: Apply when crop is at first trifoliate leaf stage or later (Spring sown) and 2 trifoliate leaf-stage or later (Autumn sown). **Serradella** varieties on which Genfarm Imazethapyr 700 WG Herbicide has been tested and found to be selective are: Avila, Elgara, Tauro. **Established**: Apply as above following cutting or grazing. |

| Subterraneum clover (Trifolium subterraneum) | Doublegee (*Emex australis*), | WA only | 50 g plus 300 mL diuron (500 g/L) plus Spraymate *™* Liasse at 2 L per 100 L water | Apply to actively growing weeds up to the 4 leaf stage and when sub-clover is at the 3 leaf stage or later. The treatment should only be used in the first year of a pasture phase to aid sub-clover establishment. Weed numbers will be reduced and survivors will be stunted. Seed set will also be reduced. Sub-clover biomass may also be reduced by this treatment. **Varieties** on which Genfarm Imazethapyr 700 WG Herbicide has been tested are: Dalkeith and Nungarin. Other weeds may also be affected, thereby reducing the total pasture biomass. |

---

**NOT TO BE USED FOR ANY PURPOSE, OR IN ANY MANNER, CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION.**

**WITHHOLDING PERIOD:**

**GRAZING:** DO NOT GRAZE OR CUT FOR STOCK FOOD FOR 14 DAYS AFTER APPLICATION.

**HARVEST:** NOT REQUIRED WHEN USED AS DIRECTED

**GENERAL INSTRUCTIONS**

This product can be used for either pre- or post-emergent weed control depending on the crops and weeds to be controlled. When the product is applied pre-emergence, susceptible weeds may emerge but growth will be retarded and weeds will either die or remain stunted and will not compete with the crop. Adequate soil moisture is important for optimum activity. When applied post-emergence, weeds will either die or remain stunted and will not compete with the crop.

A non-ionic surfactant, or an adjuvant as specified in the DIRECTIONS FOR USE, must be added to Genfarm Imazethapyr 700 WG Herbicide for post-emergence weed control. The addition of an adjuvant such as Spraymate Liasse Liquid Herbicide Adjuvant at a rate of 2L/100L water may assist in post-emergence control of summer growing weeds.
MIXING
This product mixes readily with both hard and soft water. Fill the spray tank one half to three quarters full with clean water and then, with the agitator running, add the required amount of this product and then fill the tank with water. When tank mixing this product with other recommended compatible products, first add the other product to the tank and mix thoroughly before adding this product.

APPLICATION:
Genfarm Imazethapyr 700 WG Herbicide should not be applied for a minimum of two hours before rainfall or irrigation.

Ground Application: Avoid overlaps when spraying. Apply in 50 to 100L/ha water using flat fan nozzles. The product may be applied in a band over the row in row crops. This will assist in minimizing soil residue carryover.

Aerial Application (Pre-emergence only): Avoid overlaps when spraying. Apply in a minimum of 20L/ha water in a maximum swath width of 18 m using a droplet VMD of 230 to 280 microns.

Do NOT apply Genfarm Imazethapyr 700 WG Herbicide under conditions (e.g. dead calm, excessive wind and/or small droplets) likely to cause the spray to drift onto wetlands or waterways, natural vegetation, crops other than specified on the label or land to be planted with susceptible crops.

EQUIPMENT CLEAN UP
Thoroughly flush all spray equipment with water following the use of Genfarm Imazethapyr 700 WG Herbicide and before use with other products.
Rinse water should NOT be discharged where it will reach streams, waterbodies or natural vegetation.

COMPATIBILITY:
Genfarm Imazethapyr 700 WG Herbicide is compatible with alpha-cypermethrin duo, pendimethalin, trifluralin, metribuzin, cyanazine, diuron, glyphosate, paraquat plus diquat, diquat, simazine, diflufenican, dimethoate and Omethoate.
DO NOT tank mix with selective post-emergence grass herbicides. DO NOT apply these herbicides following use of Genfarm Imazethapyr 700 WG Herbicide until grasses have resumed active growth.

RESISTANT WEEDS WARNING:

<table>
<thead>
<tr>
<th>GROUP</th>
<th>HERBICIDE</th>
</tr>
</thead>
<tbody>
<tr>
<td>B</td>
<td></td>
</tr>
</tbody>
</table>

Genfarm Imazethapyr 700 WG Herbicide is a member of the Imidazolinone group of herbicides. This product has the acetolactate synthesis (ALS) mode of action. For weed resistance management the product is a Group B Herbicide. Some naturally occurring weed biotypes resistant to this product and other Group B Herbicides may exist through normal genetic variability in any weed population. The resistant individuals can eventually dominate the weed population if these herbicides are used repeatedly. These resistant weeds will not be controlled by this product or other Group B herbicides. Since the occurrence of resistant weeds is difficult to detect prior to use, Landmark Operations Ltd accepts no liability for any losses that may result from the failure of this product to control resistant weeds.

PROTECTION OF CROPS, NATIVE AND OTHER NON-TARGET PLANTS:
DO NOT apply under weather conditions or from spraying equipment, that may cause spray to drift onto nearby susceptible plants/crops, cropping lands or pastures.
DO NOT spray within 50 m of wetlands or waterways.

Crop safety: This product may cause slight shortening of plant internodes and in some circumstances lead to crop yellowing but plants soon recover and yield is unaffected. This effect may be more pronounced when the product is used post-emergence or under poor growth conditions.
DO NOT use this product pre-emergence on Collegian and Cressy Blue field pea varieties. DO NOT use the product post-emergence on field pea varieties other than Alma, Dun, Dundale, Early Dun and Wirrega
DO NOT use pre-emergence on serradella, seedling lucerne or subterraneum clover.
DO NOT use post-emergence on chickpeas, faba beans or mung beans. Should re-sowing of chickpeas, faba beans, field peas, lucerne, mung beans peanuts, serradella, soybeans or subterraneum clover be necessary, DO NOT reapply Genfarm Imazethapyr 700 WG Herbicide.
**Follow Crops:** Under conditions that do not favour breakdown of this product, carry-over soil residues can affect susceptible follow crops. As environmental and agronomic factors make it impossible to eliminate all risks associated with the use of this product, rotational crop injury is always possible.

The following minimum re-cropping intervals (months after application) should be observed:

**Following use in winter crops:**

* The following additional requirements apply if it is intended to sow WHEAT (except varieties with CLEARFIELD Technology), BARLEY or TRITICALE during the next winter season.
  - DO NOT apply Genfarm Imazethapyr 700 WG Herbicide pre-emergence later than the end of June and post emergence later than the end of July.
  - DO NOT use Genfarm Imazethapyr 700 WG Herbicide in areas where rainfall from spraying to sowing of cereals is expected to be below 300 mm.
  - In SA and WA DO NOT use on soils of pH 5.5 (Ca Cl₂) or less in areas where rainfall from spraying to sowing of cereals is expected to be below 400 mm.
  - In NSW, Vic and SA DO NOT use the 100g/ha rate in areas where rainfall from spraying to sowing of cereals is expected to be below 400 mm.

If expected rainfall is not received following the use of Genfarm Imazethapyr 700 WG Herbicide, consult your local Landmark Operations Ltd representative before planting wheat, barley or triticale. (In calculating rainfall actually received, exclude single isolated heavy summer and autumn falls above 100mm).

**PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT**

DO NOT contaminate streams, rivers or waterways with the chemical or used containers.

**STORAGE AND DISPOSAL**

Store in the closed, original container in a cool, well-ventilated area. Do not store for prolonged periods in of direct sunlight. Triple or preferably pressure rinse containers before disposal. Add rinsing to spray tank. DO NOT dispose of undiluted chemicals on site. If recycling, replace cap and return clean containers to recycler or designated collection point. If not recycling, break, crush or puncture and bury empty containers in a local authority landfill. If no landfill is available, bury the containers below 500 mm in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots. Empty containers and product should not be burnt.

**SAFETY DIRECTIONS**

Will damage eyes. Will irritate skin. Avoid contact with eyes and skin. Wear preparing spray, wear cotton overalls buttoned to the neck and wrist and a washable hat, elbow length PVC gloves and goggles. If products in eyes, wash it out immediately with water. Wash hands after use. After each day’s use, wash gloves, goggles and contaminated clothing.

**FIRST AID**

If poisoning occurs, contact a doctor or Poisons Information Centre (Phone Australia: 13 11 26).

**MATERIAL SAFETY DATA SHEET**

For further information refer to the Material Safety Data Sheet (MSDS) which can be obtained from the supplier.

**CONDITIONS OF SALE**
